1 Summary

Scope Credit Rating assesses the company

3W Power Holdings S.A. (kons.)

Weerenweg 29 - PO Box 82

NL-1161 AB Zwanenburg (Amsterdam)

Netherlands

with the quantitative Rating Score of

B+_{quant.}

 $\begin{tabular}{lll} Rating Score 2009 & CCC+_{quant.} \\ Rating Score 2010 & B_{quant.} \\ Rating Score 2011 & BB-_{quant.} \\ \end{tabular}$

This rating score has a validity of one year.

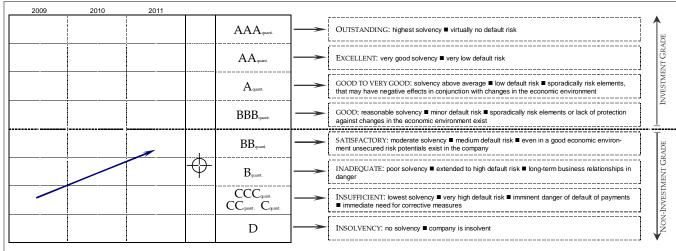

Our opinion is based on the quantitative analysis of financial data for the financial years of 2009 to 2011, as per December 31st. The assessment has been conducted by application of the rating system R-CockpitTM Professional²⁰¹¹, a development of Scope Credit Rating.

Germany, May 18th, 2012 SCOPE CREDIT RATING GMBH

sgd. sgd.

Thomas Morgenstern Managing Director Rating-Committee

Kai Zimmermann Certified Rating Analyst (BdRA)

The additions "+" and "-" to the rating score (ex. BB+ or A-) are used for fine-tuning reasons. In conclusion, the rating score of BBB would be considered a so-called "notch" better than the score of BBB-. This precise adjustment substantiates the rating result, provides a higher level of diversification and secures the comparability of rating results of miscellaneous rating objects.

© SCOPE CREDIT RATING PAGE 5 OF 11

3 Ratio Analysis

I.1 TANGIBLE FIXED ASSETS VS. TURNOVER

SECTION ASSET PROTECTION

[RATIO DESCRIPTION]

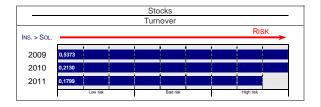

This ratio states how often the invested capital has been turned over during the regarded period.

[RATIO INTERPRETATION]

No indication of result can be provided and no rating score is possible, because this ratio is extremely dependent on individual industries. E.g. a manufacturing company requires a high level of tangible assets (e.g. plant and machinery), distributors and service providers do not.

I.2 STOCKS VS. TURNOVER

SECTION ASSET PROTECTION

[RATIO DESCRIPTION]

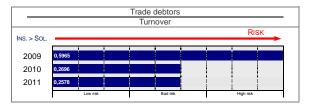

This ratio quantifies the inventory turnover and indicates the capital required for inventories (stock and work in process). This ratio can vary considerably in different industries. E.g. a distributor does have higher stock turns than a manufacturing company.

[RATIO INTERPRETATION]

A high result indicates inefficient organised stock management processes or slow moving stock because of overstocked material or poorly selling products. Service providers usually have not significant values in stock. A high level of stocks in relation to turnover indicates that stock management is not yet optimal and also possibly a high proportion of slow-moving stock.

1.3 TRADE DEBTORS VS. TURNOVER

SECTION ASSET PROTECTION

[RATIO DESCRIPTION]

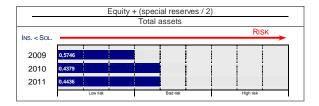

This ratio measures the debtor duration and the quality of debtor management in the company.

[RATIO INTERPRETATION]

The lower this ratio, the better the solvency and payment behaviour of the customers or the more effective the company's debtor management. A higher result in this ratio indicates a higher risk and write-off measurements may be necessary.

I.4 EQUITY RATIO

SECTION ASSET PROTECTION

RATIO DESCRIPTION]

This ratio illustrates to what extent the company and its assets are financed with equity capital.

[RATIO INTERPRETATION]

The higher this ratio, the higher the financial stability of the company. High variations in profitability of the company or of the industry do require a higher equity ratio. Results below 10% are a warning signal.

1.5 Trade Creditors vs. cost of Material

SECTION ASSET PROTECTION

[RATIO DESCRIPTION]

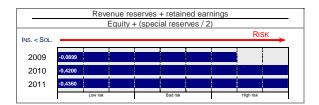

This ratio measures to what extent the company uses its suppliers as a source of financial funds.

[RATIO INTERPRETATION]

A low value in this ratio is an indication for a high ability of the company to meet its financial obligations, and vice versa a high value in this ratio may indicate a higher risk of a default of payments.

© SCOPE CREDIT RATING PAGE 6 OF 11

1.6 REVENUE RESERVES + RET. EARNINGS VS. EQUITY SECTION ASSET PROTECTION

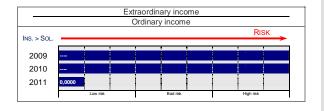

[RATIO DESCRIPTION]

The result of this ratio illustrates to what extent the equity has been built up by former profits of the company and to what extent profits are being distributed to shareholders.

[RATIO INTERPRETATION]

The higher this ratio, the stronger the self-funding capability of the company. A low level of revenue reserves and retained earnings included in equity indicates a poor self-funding capability of the company. Either the company's profitability was insufficient in the past or a high proportion of the profits have been distributed to shareholders. This has a negative effect on the rating evaluation.

II.1 EXTRAORDINARY INCOME VS. ORDINARY INCOME SECTION PROFITABILITY

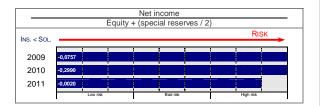

RATIO DESCRIPTION]

This ratio explains where the results of the company do come from - ordinary operational business or extraordinary items e.g. release of provisions.

[RATIO INTERPRETATION]

The ratio illustrates to what degree the profits are generated by operational business. A low level of extraordinary income in relation to ordinary income indicates that the profit is mainly being generated in the operational core business and not by extraordinary transactions.

II.2 RETURN ON SHAREHOLDER'S EQUITY (POST TAX) SECTION PROFITABILITY

RATIO DESCRIPTION]

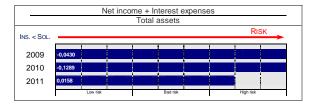

The ratio shows the rate of return on shareholder's equity.

[RATIO INTERPRETATION]

The lower the equity ratio is, the higher this ratio should be. A low equity ratio and a low return rate is an indication for the company's instability.

II.3 RETURN ON ASSET

SECTION PROFITABILITY

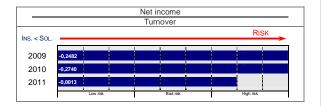

[RATIO DESCRIPTION]

The ratio shows the profitability of the total capital in the company. It states if the company's success in producing profits is adequate to meet the expectations of owner and creditor.

[RATIO INTERPRETATION]

The value of this ratio states the return on total capital invested in the company. A high value in this ratio is a strong indication for a solid and profitable investment. A poor result in this ratio instead can be judged as a negative signal for the future ability of the company to meet its debt payments.

II.4 RETURN ON SALES (AFTER TAX) SECTION PROFITABILITY

[RATIO DESCRIPTION]

This ratio illustrates the proportion of turnover that could be turned into profit after deduction of all expenses.

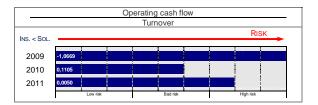

[RATIO INTERPRETATION]

This ratio indicates the profitability as a percentage of sales (after tax). There are big variations in different industries. A high return on sales indicates a high level of economical stability.

© SCOPE CREDIT RATING PAGE 7 of 11

II.5 CASH FLOW MARGIN

SECTION PROFITABILITY

[RATIO DESCRIPTION]

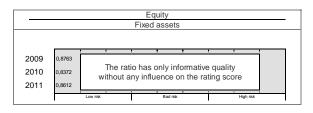

This ratio indicates to which degree the company is able to turn profits from its ordinary business into cash inflow. In addition to operating profit, this ratio includes depreciation of the year and movements in working capital and provisions.

[RATIO INTERPRETATION]

A high level of operating cash flow return on turnover indicates a high economic stability and capability of internal funding.

III.1 FIXED ASSETS COVERAGE RATE A (EQUITY)

SECTION DEBT COVERAGE

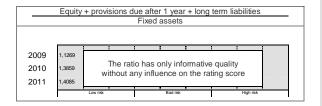

[RATIO DESCRIPTION]

This ratio indicates if fixed assets are being covered long term by shareholders' funds.

[RATIO INTERPRETATION]

This ratio indicates to what extent long term assets are financed by long term funds. This ratio varies from industry to industry and is therefore not evaluated by this analysis. A low level of fixed assets coverage by equity indicates a high risk because long term assets are not financed adequately by equity. Such a result would be an indication of the financial instability of the company.

III.2 FIXED ASSETS COVERAGE RATE B (LONG TERM) SECTION DEBT COVERAGE

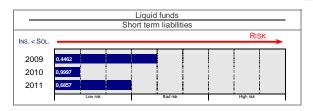

[RATIO DESCRIPTION]

This ratio states if fixed assets are being covered long term by shareholders funds and long term liabilities.

[RATIO INTERPRETATION]

This ratio indicates to what extent long term assets are financed by long term funds consisting of shareholders' capital and long term provisions and liabilities. This ratio varies very much from industry to industry and is therefore not evaluated in the analysis.

III.3 CASH RATIO (LIQUIDITY RATIO 1ST GRADE) SECTION DEBT COVERAGE

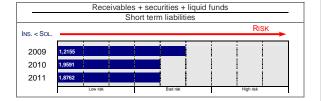

[RATIO DESCRIPTION]

This ratio indicates the ability of the company to pay its current and future short term liabilities based on cash in hand and bank balances.

[RATIO INTERPRETATION]

This ratio indicates the cash liquidity of the company. A high cash ratio (liquidity ratio 1st grade) indicates that the short term liabilities are covered sufficiently by cash liquidity. A low cash ratio (liquidity ratio 1st grade) indicates that the short term liabilities are not covered by sufficient cash liquidity.

III.4 QUICK RATIO (LIQUIDITY RATIO 2ND GRADE) SECTION DEBT COVERAGE

[RATIO DESCRIPTION]

This ratio indicates the ability of the company to pay its current and future short term liabilities using current assets in cash or near cash form (cash in hand, bank, trade receivables and marketable securities).

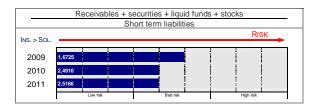

[RATIO INTERPRETATION]

The result of this ratio states the liquidity of the company in the near future. A low level of the quick ratio (liquidity ratio 2nd grade) of the company indicates an insufficient liquidity because short term liabilities are not covered by short term liquidity.

© SCOPE CREDIT RATING PAGE 8 OF 11

III.5 CURRENT RATIO (LIQUIDITY RATIO 3RD GRADE)

SECTION DEBT COVERAGE

[RATIO DESCRIPTION]

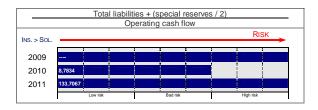

This ratio states the ability of the company to pay its short term liabilities based on total short term liquidity consisting of cash in hand, bank, trade receivables, marketable securities and inventory.

[RATIO INTERPRETATION]

The current ratio (liquidity ratio 3rd grade) indicates to what degree short term liabilities are covered by current assets and indicates medium term liquidity. It illustrates the liquidity of the company in the medium term.

III.6 DYNAMIC DEBT RATIO

SECTION DEBT COVERAGE

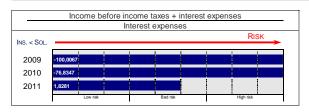

[RATIO DESCRIPTION]

The ratio states, how many years the company would need to settle total liabilities with the operative cash flow achieved in the current year.

[RATIO INTERPRETATION]

The relation of total liabilities to operating cash flow indicates the capability of a company to settle its liabilities using internally generated cash flows. A low ratio achieved is positive because total liabilities could be settled by few annual cash

III.7 EBIT INTEREST RATIO

RATIO DESCRIPTION]

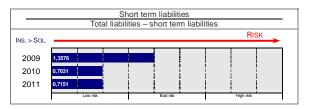

The EBIT interest coverage ratio compares profit before interest and tax to the interest expenses of the current year.

[RATIO INTERPRETATION]

The lower this ratio, the higher the relative interest burden on the company. A high ratio achieved by the company indicates low interest expenses in relation to profits achieved, which has a positive impact on the rating evaluation.

III.8 SHORT TERM DEBT INTENSITY

SECTION DEBT COVERAGE

[RATIO DESCRIPTION]

The values of this ratio show the relation between the short term liabilities and the long term liabilities. The higher the proportion of short term liabilities, the lower the financial stability.

[RATIO INTERPRETATION]

The proportion of short term liabilities should be in a reasonable relation to long term financial liabilities. Long term financing gives funding stability to the company and indicates a longer term solvency.

III.9 OPERATING CASH FLOW

SECTION DEBT COVERAGE

Net Income

- + Depreciation
- +/- Difference in provisions
- +/- Difference in inventory +/- Difference in receivables and other assets
- +/- Difference in trade creditors

= Operating Cash Flow

[RATIO DESCRIPTION]

The ratio cash flow is an economic measurement instrument, which illustrates the ability of a company to meet is debts obligations. It covers all cash inflows and cash outflows of the company's activities in the regarded period. The operating cash flow accounts the values of only operational activities of the company.

[RATIO INTERPRETATION]

Cash flows should not be negative. The operating cash flow as a ratio focuses on the sustainability of the cash inflows and cash outflows in regard to the turnover achieved. In case of a negative value in this ratio, the company does not have the ability to generate cash surpluses out of the turnover produced.

5 Audit Engagement

Scope Credit Rating has been contracted to conduct a quantitative risk analysis (Financial Strength Rating) for the appointed company. The assessment has been accomplished based on the "rules of conduct for external ratings" of Scope Credit Rating, which can be viewed at the rating agency's website. The analysis was concentrated on the quantitative criteria of a rating process and includes the issue of a rating notation according to the international standards.

The evaluation is based on information and details which were included to the financial statements of the appointed company. Main details were reviewed regarding plausibility and consistency; however Scope Credit Rating cannot safeguard the accuracy of these information and details.

The rating notation of this report resulted in accordance with the EU Regulation No. 1060/2009 of the European Parliament and European Council. The assessment of the financial data and preparation of this report was made conscientiously and to the best knowledge. However, content and result are an opinion only and no liability is accepted for decisions being made based on the results of this report.
