

Ukraine

Rating report

Rating rationale

Significant international financing support: Loan and grant financing alongside prudent debt relief from a range of international multilateral, bilateral-official and private creditors and donors. Sustained international financial assistance coupled with increased sovereign borrowing in the domestic market are crucial to a continued elimination of monetary financing and reinforcing long-run debt sustainability. In December 2023, the European Council approved the beginning of accession talks of Ukraine to the European Union.

Institutional preparedness for this crisis: The National Bank of Ukraine adopted speedy administrative measures and capital controls following the full-scale invasion to preserve foreign-exchange reserves, stem deposit flight, inject liquidity and adopt regulatory forbearance. It has appropriately cut its policy rate more recently as inflation has declined but nevertheless ensured comparative hryvnia stability – seeing liberalisation to a “managed flexible” exchange rate.

Resilient banking system under the exceptional circumstances: The resilience of the domestic financial system since the war supports the elimination of monetary financing, boosts sovereign financing in domestic capital markets and anchors the domestic-debt ratings of the sovereign. It does, however, deepen an existing sovereign-banking nexus.

Rating challenges: i) current negotiation around the second external debt restructuring, expected to be finalised in the coming month(s); ii) long-run debt-sustainability risk amid a protracted conflict; iii) continued risks to external-sector resilience and elevated dollarisation; and iv) vulnerabilities for banking-system stability.

Figure 1: Ukraine’s sovereign rating drivers

Risk pillars		Quantitative		Reserve currency*	Political risk**	Qualitative***	Final rating (foreign currency)
		Weight	Indicative rating	Notches	Notches	Notches	
Domestic economic risk		35%	bb	UAH	Ukraine	0	C
Public finance risk		20%	b+			0	
External economic risk		10%	ccc			+ 1/3	
Financial stability risk		10%	bbb-			+2/3	
ESG risk	Environmental factors	5%	bbb-	[+0]	[-3]	- 1/3	Final rating (local currency)
	Social factors	7.5%	b+			- 1/3	
	Governance factors	12.5%	ccc			- 1/3	
Sovereign Quantitative Model		ccc				0	CCC
Additional considerations (local currency)						0	
Additional considerations (foreign currency)****						-2	

*The reserve-currency quantitative adjustment applies to currencies in the IMF’s Special Drawing Rights (SDR) basket.

**The political-risk quantitative adjustment is based on the World Bank’s Political Stability & Absence of Violence/Terrorism index.

***The qualitative scorecard analyst adjustments, capped at one notch per rating pillar, are weighted equally with an aggregate adjustment rounded to the nearest integer.

****For Ukraine, a two-notch extraordinary downside adjustment to foreign-currency issuer ratings reflects formal negotiations around external debt restructuring. For details, please see Scope’s [Sovereign Rating Methodology](#). Source: Scope Ratings.

Credit strengths and challenges

Credit strengths	Credit challenges
<ul style="list-style-type: none"> • Significant international financial support and EU accession talks • Adept central-bank response since the crisis • Resilient banking system under the exceptional circumstances • Meaningful improvements to external-sector stability 	<ul style="list-style-type: none"> • Expectation of agreement around debt restructuring • Long-run debt sustainability risk amid a protracted war • External-sector risks • Banking-system vulnerabilities

Outlook and rating triggers

The Negative Outlook for long-term foreign-currency issuer ratings reflects expectation of the forthcoming external debt treatment.

The Stable Outlook for local-currency issuer ratings reflects a view that risks relevant to the domestic debt remain balanced.

Positive rating-change drivers	Negative rating-change drivers
<p>Foreign-currency long-term issuer rating:</p> <ul style="list-style-type: none"> • Restructuring plans with external commercial creditors do not reach agreement and Ukraine resumes the servicing of external private debt <p>Domestic-currency long-term issuer rating:</p> <ul style="list-style-type: none"> • Reduction in security risks; improved long-run debt sustainability; and/or significant easing of banking-sector risks 	<p>Foreign-currency long-term issuer rating:</p> <ul style="list-style-type: none"> • Finalisation of external commercial debt restructuring or borrower unilaterally suspends Eurobond payment after debt-service suspension ends <p>Domestic-currency long-term issuer rating:</p> <ul style="list-style-type: none"> • Likelihood rises of restructuring of Ukrainian domestic debt instruments

Domestic economic risk

Overview of Scope's assessments of Ukraine's Domestic Economic Risk

SQM* indicative rating	Analytical component	Assessment	Notch adjustment	Rationale
bb	Growth potential and outlook	Neutral	0	Moderate long-run growth potential but significant uncertainty around recovery trajectory given the war; growth has been strong since 2022 lows
	Monetary policy framework	Strong	+1/3	Significant pre-crisis improvement in monetary governance; central-bank measures since the full-scale war have been crucial in the anchoring of macroeconomic and financial-sector stability; elimination of monetary financing
	Macro-economic stability and sustainability	Weak	-1/3	Average economic diversification and labour-market flexibility, protracted conflict with Russia undermines longer-run macroeconomic stability

Figure 3: Nominal GDP and GDP per capita, 2023

Public Finance Risk

Overview of Scope's assessments of Ukraine's Public Finance Risk

SQM indicative rating	Analytical component	Assessment	Notch adjustment	Rationale
b+	Fiscal policy framework	Neutral	0	Record of fiscal discipline with oversight of the IMF and multilateral & bilateral creditors; reduced spending flexibility due to the war
	Long-term debt trajectory	Weak	-1/3	Long-run debt sustainability is very challenging; discussions on external debt restructuring currently ongoing
	Debt profile and market access	Strong	+1/3	Restricted international market access, high foreign-currency risk in government debt, but domestic market access and extraordinary access to global multilateral and bilateral lenders and donors

Figure 5: Contributions to change in debt levels, pps of GDP**

External economic risk

Overview of Scope's assessments of Ukraine's External Economic Risk

SQM indicative rating	Analytical component	Assessment	Notch adjustment	Rationale
CCC	Current account resilience	Strong	+1/3	Current-account deficits largely outweighed by reliable inflows comprising grant and concessional debt funding, alongside sizeable remittances since escalation of the war
	External debt structure	Neutral	0	Reversal in an earlier declining external-debt trajectory, a high share of external debt that is short-term, near-term maturities of external private debt incentivises debt restructuring
	Resilience to short-term external shocks	Neutral	0	Record levels of reserves, reflected in significantly-improved coverage of short-term external debt

Figure 7: Current-account balance, % of GDP

Financial stability risk

Overview of Scope's assessments of Ukraine's Financial Stability Risk

SQM indicative rating	Analytical component	Assessment	Notch adjustment	Rationale
bbb-	Banking sector performance	Neutral	0	Resilience of the banking sector, but higher NPLs and declines of capital adequacy. Modest decline of dollarisation. However, especially vulnerabilities at smaller, privately-owned banks.
	Financial sector oversight and governance	Strong	+1/3	History of challenges in financial supervision; however, management of financial stability since the full-scale war has been exceptional
	Financial imbalances	Strong	+1/3	Low levels of private-sector debt and lack of credit imbalances given a developing domestic capital market and weak credit growth since full-scale war

Figure 9: Non-performing loans, % of total loans

Source: World Bank (WB), Scope Ratings

Figure 10: Tier 1 capital, % of risk-weighted assets

Environmental, Social and Governance (ESG) risk

Overview of Scope's assessments of Ukraine's ESG Risk

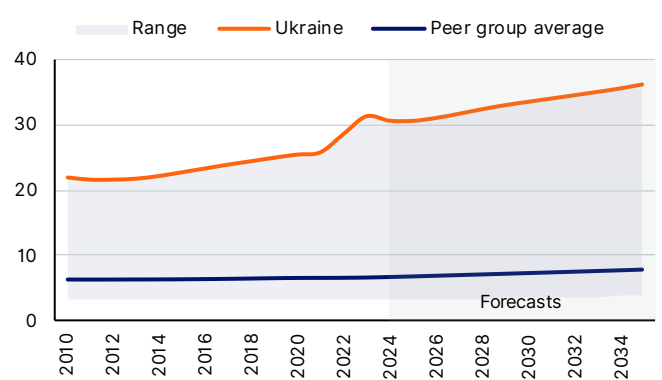

SQM indicative rating	Analytical component	Assessment	Notch adjustment	Rationale
b-	Environmental factors	Weak	-1/3	Elevated transition risk for higher carbon-intensity developing economy; the war is causing long-lasting environmental damage
	Social factors	Weak	-1/3	Poverty, emigration and internal displacement of people due to the war, rising old-age costs, moderate income inequality, moderate performance on education, weaker wealth dynamics
	Governance factors	Weak	-1/3	War on sovereign's territory and associated exceptional adverse credit implications

Appendix II. Rating peers

Rating peers are related to sovereigns with an indicative rating in the same rating category or adjacent categories, as assigned by Scope's sovereign quantitative model after accounting for methodological reserve-currency and political-risk adjustments.

Peer group*
n/a

*Publicly-rated sovereigns only; the full sample of sovereign-rating peers may be larger.

Appendix III. Economic development and default indicators

IMF Development Classification	Emerging market and developing economy
5y USD CDS spread (bps)	n/a

Appendix IV. Statistical table for selected SQM indicators

This table presents a selection of the indicators (24 out of 30 – with the governance indicator reflecting a composite of five indicators) used in Scope's quantitative model, in line with Scope's Sovereign Rating Methodology. The metrics and sources for the data presented here ensure comparability across global country peers and may therefore differ from data from national and other select international statistical series.
